How to Trade Bitcoin Cash (BCH) Futures on BTCC

Original:

<https://www.btcc.com/en-US/academy/crypto-basics/how-to-trade-bitcoin-cash-bch-futures-on-btcc>

Bitcoin Cash is both a digital currency and a means of electronic payment. It originated in August of 2017 as a result of a hard fork in the [bitcoin](#) network. Bitcoin Cash's primary technological distinction from Bitcoin is that its [blockchain](#) supports block sizes up to four times greater than Bitcoin's. With a bigger block size, more transactions may be processed in one block, allowing the blockchain to process more transactions per second.

Proponents of bitcoin cash and bitcoin have different underlying assumptions. The Bitcoin Cash team wants to make their currency the de facto standard for buying things online. Bitcoin proponents, on the other hand, see the cryptocurrency primarily as a digital gold that can be used as a hedge against inflation.

What are Bitcoin Cash (BCH) Futures

The term “Bitcoin Cash Futures” refers to an agreement between two parties to acquire or sell Bitcoin Cash at a specified future date and price. Bitcoin Cash serves as the underlying asset for this futures contract. In this way, the value of a Bitcoin Cash futures contract follows the value of Bitcoin Cash quite closely.

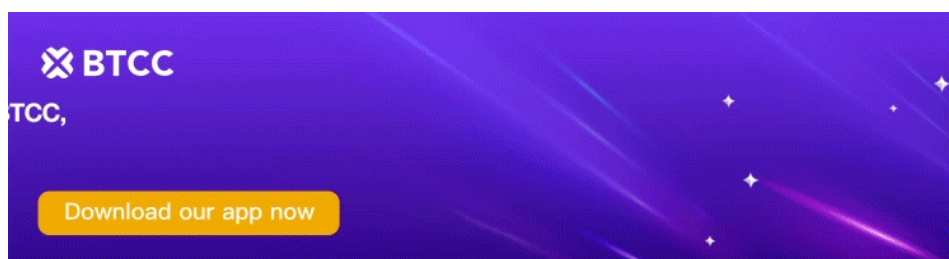

Thus, futures trading provides an alternative to buying and selling the underlying cryptocurrency (aka spot trading). Buying Bitcoin Cash at a low price and selling it at a high price might be profitable in spot trading. However, you can only make money with this transaction if the Bitcoin Cash price is rising. But in a down market, spot trading is impossible. Furthermore, in spot trading, you cannot use leverage.

The ability to long or short Bitcoin Cash and the availability of leverage are two of the main benefits of trading Bitcoin Cash futures over trading Bitcoin Cash spot.

- Market orders: Users place orders at the best current price in the market to achieve fast trading.
- Limit order: A limit order is used to copy the top/bottom, and refers to a buy/sell price set by the user. After the market reaches the limit price, the margin trading can be executed.
- Stop Order: A stop order is an advanced limit order, and users can customize a buy/sell price. After the market reaches the limit price, the margin trading can be executed.
